Press Release

RMB and the ITT Technical Institute School of Criminal Justice will evaluate the Apprehender in Law Enforcement and Policing for the next generation of officers.

PRESS RELEASE: 07/21/2009

Anaheim, CA- July 21, 2009 RMB and the ITT Technical Institute School of Criminal Justice set out to test and evaluate the Apprehender. Michael Gagner, Chair, of the School of Criminal Justice said: "My expectations of the Apprehender were high and I was not disappointed. I have tested the Apprehender on retired officers, current officers and students. The reaction is almost always the same, one of surprise in regards to the effectiveness of the control that is provided by a simple twist and applying leverage. Thus far the Apprehender has been a great success with my students. After discussing the Apprehender with a Chief Probation/Parole Officer in the Durham, NC Community Corrections Department, I cannot wait to share my excitement with the community on this great product, with sincere appreciation for such a great law enforcement product and idea."

RMB continues to get wide-spread acceptance of changes moving from striking directly to cuffing with the Apprehender. "I see a lot less litigation coming across my bench" said one judge of the 134th District Court.

RMB Industries, Inc. manufactures of the Apprehender™ Cuffing Apprehension Control Device (CB-01) which combines the power and strength of a baton with the restraint and control of a handcuff, in an ergonomic design that allows even the smallest police officer to control the largest suspect safely and easily. The secret is in the special design of the CB-01 that uses patented cuffing technology with the power of leverage to increase the strength, reach and effectiveness of any police officer who uses it. For more information please visit www.apprehender.net or call 888.459.1615.
